### FREE GOLD FOUND UP CITY CREEK

Colored Expressman Gets Fine Samples From the Lakeview No. 3 Claim

COME good looking gold-bearing quartz was brought down yesterday from the Lakeview mining property near the head of City Creek canyon. It was taken from the surface croppings of a ledge three or four inches wide by Thomas Turner, the colored expressman, who has an abiding faith in the future of this undeveloped mining territory. The find was made on the Lakeview No. 3, which was located only two weeks ago. No report has been received from the assayers, but the presence of gold is attested by numerous colors secured in

The other claims in the group, the Lakeview No. 1 and No. 2, were staked out five or six years ago. There is a large cave on one of the properties, which exposes a strong mineral lead, and also forms the natural mouth of a tunnel. Mr. Turner and an assistant and also forms the natural mouth of a tunnel. Mr. Turner and an assistant have gone to work on the ground and will cross-cut from the cave for the lead opened on the surface of the Lakeview No. 3. The theory held by Turner and his co-owner, Will F. Wantess, is that the Park City mineral zone crosses the City Creek canyon and that gold and silver values will be found in place with sufficient exploration.

The antics of various picnic parties

sufficient exploration.

The antics of various picnic parties have been a source of considerable annoyance to the prospectors. Oftentimes the picnickers will amuse themselves by putting up location notices, and on several occasions the pseudo miners have had to be looked up and notified to withdraw their claims in order to prowithdraw their claims in order to pro-tect the original title.

### IMMENSE CAVERN FOUND BY JAMES KENNELLY

James M. Kennelly, the well-known prospector, writes from Good Springs, Nev., of the discovery of an immense cave one-half mile from Potosi Springs in Lincoln county by himself and his three boys. They were traveling over the Mount Alcott range looking for erties with depth ar mineral when two of the young men his people in Butte. found the entrance to the cavern. They secured ropes and descended for 100 feet before reaching the floor. They explored several large rooms filled with stylactites and other beautiful crystallzations. Mr. Kennelly found it impossible to climb out of the cave and the boys were obliged to make a ladder with tree branches and baling wire to get him to the surface. The cave is so large that they could not determine its limensions and they believe that it will ead to an underground river.

Speaking of mining at Good Springs,

Mr. Kennelly says that several prop-erties are being worked. The American company has the Columbia copper mine and George Gunn is in charge. The Needles G. M. company is operating the 9" copper mine. Several people from Montana and Oregon are looking over the canmp and Mr. Griffin, the chief surveyor of the San Pedro, says that travel may begin through to Los Angeles October 15. All the miners are waiting for the road to take their ore to Salt Lake.

# STRUCK RICH ORE IN

Special to The Tribune.

CALIENTE, Nev., June 23-L. White, W. R. Newman and "Doc" Lawler of San Francisco passed through camp today en route to Moapa. They are interested in a group of gold-copper properties twenty miles north from the Muddy and have had a working lease and bond on same for the past five months. Their representative at the mines, George Fischer, reports having struck rich ore in the Cupid, one of the claims of the Golden Fleece group, and has taken out twelve tons of high-grade ore from a thirty-foot drift at the botiom of an eighty-foot shaft, which was sunk at an angle of 52 degrees on the hanging wall of a ten-foot ledge. Their reports on this ore show values of from \$16 gold and 23 per cent copper to \$72 gold and 14 per cent copper, the latter

gold and 14 per cent copper, the latter almost at grass roots.

The values in gold decrease with depth and those in copper increase. The ledge, which was but three feet wide at top of shaft, is now ten feet four inches wide at a depth of eighty feet. The hanging wall is granite and the footwall at surface is granite with a year of brown tale lying between it and year of brown tale lying between it and vein of brown tale lying between it and the vein proper. The ledge has not been crosscut at depth, but a drift has been run sixty feet northeasterly and forty feet southwesterly, and the ledge crops out through four claims of the group. The remaining four claims ly-ing parallel with these carry a ledge of gold ore showing but small valuations in course, but the leaves believe the gold ore snowing but small valuations in copper, but the leasers believe that with depth the values will all run to copper as in the parallel claims. The ledge in the second row of claims dips toward the gold-copper ledge at an angle of about 30 degrees, so that the leasers believe that at depth the two ledges will form a contact and merge into one immense ledge. There are two other similar groups lying northeast from the Golden Fleece, which these gentlemen will examine on this trip, with a view

There are now eleven prospectors working on claims within a radius of five miles of Caliente and all report en-couraging prospects in their claims. Alexander and Palmer on the Louisiana Alexander and Palmer on the Louisiana Purchase group; Fred Foster on the St. Louis Group; Buckley and White working the Mastadon group; McKay and Fitch on the Southern Cross group; the Ramberger-Fetterman contractors on the Fetterman tunnel; Olson, Lee and Farrow, owners of the Japan lode, have all taken very promising ore, going well in gold and silver from their prospects and with development all of these propand with development all of these properties give good promise of being shippers within the present year. Palmer sold two of his claims to the Alexander boys Monday and they are doing development work on their claims, running a tunnel in on the ledge in both claims.

tunnel in on the ledge in both claims. Charles Thomas, a miner, recently ar-

rived here from Butte, Mont., brought | THE TRIBUNE NEWS STANDS | DIGGING MACHINES in some samples of steel galena ore, ta-ken from a claim which he located last Saturday north of camp. He says that he has stripped the ledge thirty feet and found it averaging four feet in width and lying in a lime formation, the galena carried in lime and spar formation. From the presence of considerable decomposed quartz honey-combed and filled with iron oxide, with some hematite, Mr Thomas believes that gold values will also be found in

Charles Flick, a Cripple Creek mining and mill man, passed through camp to-day en route to Los Vegas ranch. From there he will go north twenty miles for the purpose of examining a group of claims known as the Buena Vista group, with a view to bonding and working the same. He says that he has been through this country before and considers the mineral outlook equal to anything in Colorado for surface show-ings. He is employed by a number of Denver and Cripple Creek capitalists to look over this property and pick up any other groups which in his opinion will prove pay investments along the line of the San Pedro road.

James Hunter of Boston, accom-panied by B. N. Morris, a prospector for years in Nevada and Utah, passed through camp today and will examine a group of silver properties near Kier-nan's ranch with a view to bonding and developing same.

John F. Buxton of Butte, Montana, representing the Boston & Montana Mi-ning company, and incidentally the Amalgamated, passed through camp today from the front en route to Butte, where he will report on a group of cop-per claims which he and his associates have located near St Thomas, on the upper Colorado river, about twenty miles south of the San Pedro right of way between Moapa and Los Vegas ranch. Mr. Buxton says that there are some of the finest showings in the district which he has visited of any in the West for copper. He says that there are a score of mines along the Colorado river which in early days were worked profitably for free gold, which at a slight depth have gone to copper, and that all of these properties will pay to work for copper by the erection of a smelter which can readily be accomsmelet which can readily be accom-plished near the group which he has been examining on the river. He had some very rich samples of copper ore taken from the claims, going from 17 to 60 per cent in copper with a small perentage of gold and silver. He states that there are several ledges running northeasterly and southwesterly through the district which give every indication of developing into pay prop-erties with depth and will so report to

### TONOPAH-BELCHER IS SHIPPING SACKED ORE

Teams started yesterday from th l'enepah-Belcher at Tenepah with five carloads of sacked ore, which has been saved in development work. It will be hauled a distance of eighteen miles to the railroad and shipped to Salt Lake As the rock contains gold to the value of \$60 or \$70 a ton the returns will tend to make things look pleasant around the headquarters of the company. In addition to the grade above mentioned the tion to the grade above included the mine is well supplied with one which can be hauled at a profit, but will be good for shipping when the railroad strikes the camp. This ore has been piled on the dump and will total up 2000 or 4000 tons. The sacked shipment will the first from the property for sev-

The double compartment shaft is down 200 feet and the quantity of ore blocked out gives a satisfactory assur-

### THREE CARS OF TETRO DUE HERE THIS MORNING

The Tetro at Bingham will come in with three more cars of its usual grade of ore this morning. The good stuff was

loaded yesterday.

There was an unpleasant accident at the mine yesterday, when a miner named Strang, a brother of the superinnamed Strang, a brother of the supern-tendent, fell from the bucket as he was being lifted out of the shaft and fell thirty feet. He was taken to the Holy Cross hospital last evening. It is not thought that any bones were broken.

### **NEW COMPRESSORS AT** THE CACTUS PROPERTY

Joseph Dederichs, the contractor, who returned yesterday from Newhouse, said that when he left his men were preparing the missonry for the new compressor plant at the Cactus, which is to be up and in running order in fourteen days. The old plant, Mr. Dederichs states, will be simultaneously removed to the Cactus mill. He will go back to take another squint at the work

### GOLD STRIKE MADE IN BLAINE COUNTY, IDALO

Finney & Fleming report an important strike in their Five Points mine in the Little Smoky, near Soldier, Blaine county, In crosscutting on the lower tunns Ida. In crosscutting on the lower tunner a big ore body was encountered a few days ago at a depth of about 60 feet from the apex of the ledge. Average samples from this new chuie run about 340 in gold, with some silver, lead and copper.

### DALY-WEST LOSES A DIME ON A DULL DAY

Business at the mining exchange Business at the mining exchange closed yesterday with a total of 2065 shares sold, representing a cash value of \$4819. Rip Van Winkle would have felt very much at home, as the trading was of a very somnolent character. Daly-West created the chief diversion, but did nothing to justify the role of star performer. Opening at \$23.69 it changed hands in the afternoon at \$23.50 and closed at the latter figure. Only 125 shares were sold at both calls. Just 600 shares of Tetro changed Just 600 shares of Tetro changes hands. Five hundred shares brought 32.5-8 cents and 100 shares were sold in a block for 33 cents. New York was knocked down in a 1000 lot for 41s cents, and a similar quantity of Star Con, went

over the counter at 101/2 cents. Follow-

ing are the quotations

BOSTON, Mass., June 23.—The copper shares continue the attractive feature of the Boston market, aithough local issues are by no means neglected. Trading continues spirited and prices, with one or two exceptions, sirong. Realizing was to be seen in spots, but sharp railies followed. The feeling that we are to have a good market is becoming more general. Com-

# AT THE ONTARIO

In Three Days the Damage Occasioned by the Fire Can Be Estimated.

LARGE gang of men is at work cleaning up the ruins of the On-A tario shafthouse, which burned down last week; but it will be three days or longer before the man-agement will be able to ascertain the condition of the machinery. It is thought possible that some of it can be cleaned up and used again, but this will depend on the heat to which it was subjected. Most of the machinery was subjected. Most of the machinery was purchased years ago and cost a mint of money. Prices have gone down in the meantime, and it will be possible to put in a new plant as serviceable as the old for a third of the cost. There was an old Cornish engine which had been in the order. had been in the shafthouse for twenty-five years, but had not been used for years past, although in good condition. Other portions of the plant purchased for special kinds of work now com-pleted will not have to be replaced.

There are no other shafts or outlets through which work can be carried on at present, so the workings of the mine will be abandoned until a new hoist-ing plant can be erected. Fortunately, the timbering and other underground improvements have been kept up and there will be a minimum of loss from deterioration. The massive stone foundations which supported the building and machinery were not affected by the fire and will save fully half the cost

of rebuilding.

Park City will be a sufferer from the fire in the loss of a large number of its wage-earning population. It is re-ported that fifty of the Ontario miners left early in the week for Butte City, and it is known that several miners who were in Sait Lake at the time of the fire are preparing to send for their families and go to Nevada or other mining districts where work is plentiful

mission houses are active on both sides of the market, while traders are making the best of the activity. Hornblower & Weeks, Si State street, Boston, and 10 Wall street. New York, furnish the following quota-

Ore and Bullion.

Yesterday's ore and bullion settlements, as reported yesterday by McCornick & Co., total \$57,700, divided as follows: American bullion, \$53,700; gold, sliver, lead and copper ores, \$28,600.

In the metal market sliver ruled at \$515, cents, lead at \$5,500,40, \$5,10 per hundredweight, and casting copper at 11% cents a pound.

Mining Notes.

Mining Notes.

The warm reception given to Tenopah stocks on the local exchange is likely to result in the listing of many other shares from the Nevsda benauza. It is pointed out that Salt Lake is nearer to the ground than San Francisco and should be able to handle the business that now goes to San Francisco. The plan should be the easier of accomplishment since some of the largest stockholders in Tenopah mines are residents of Salt Lake.

To the Merchants' Protective Association:

Yours of the 16th inst. to hand

and contents noted. In obtaining settlement of this claim for me you have accomplished what all claim was about twelve years old. For four or five years it was in the hands of attorneys for col-lection, and was returned to me as worthless. It is equal to \$700.00 found, and I desire to commend you for your perseverance and JOHN MOUNTEER, Grocer, 1026 Second Street

Does anyone owe you? Do you want it? We will collect it. That's our business.
